

Configured Solution for Change Control Documentum • Alfresco • Oracle WebCenter

A next generation user interface for managing Change Control

CARA³ © *PATENT PENDING* is a brand new and unique concept building on the CARA tradition – an ergonomically designed, fast web application for Documentum. It is designed to facilitate the creation, review, approval and management of documents. It leverages core repository functionality while also providing performance enhancements and ergonomic improvements. In addition, **CARA³** provides new functionality to better manage controlled documents such as SOPs or complex documents such as reports or submissions through **CARA³ Structures** and through reporting tools like the *Task Manager* and *Status Manager*. **CARA³** is underpinned by the Generis DocConfigurator product which allows rapid setup and configuration of the docbase to requirements. *Free up your end users from the constraints of existing interfaces and allow them to focus on content.*

Unique Features

DIMENSIONS

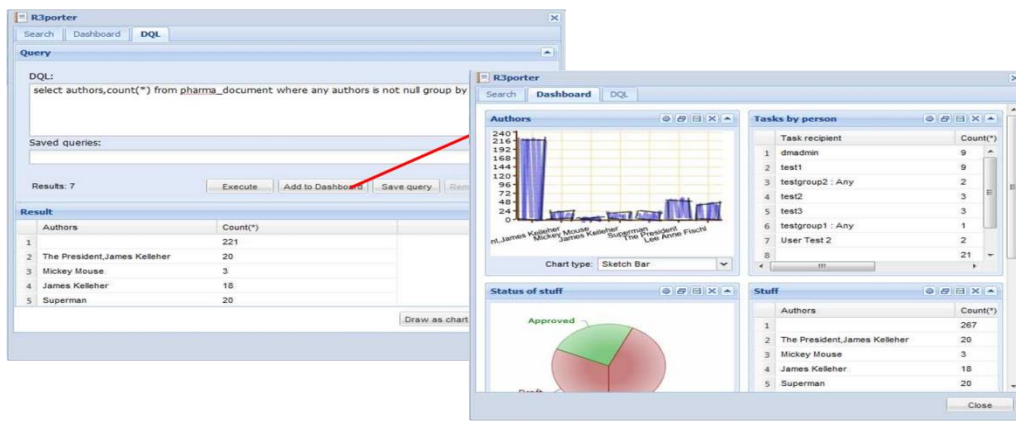

CARA³ has a unique ability to allow users to build their own tree view (“Dimensions”). Choose any properties (one per level for up to 5 levels) and browse the resulting tree view. The browser window also allows users to open more than one “Repository Explorer” window within the main window, using a desktop-like Start Menu and window management.

WIDGETS

Extensible panel showing widgets – choose from core set (e.g. properties, renditions) or create your own, linking in any web service as a widget e.g. database view, portlets. Rearrange the widgets pane with drag & drop.

VIEW MANAGEMENT

Define different views for different user groups / usage scenarios. Specify different properties, widgets, filters, and other options, allowing users to work in the way that best supports their processes.

CARA³ RapidDeploy – Change Control

Change Control is one of the most strictly managed and complex business processes that most companies face – and traditionally tools are used which are separate from the content that relates to Change Management (SOPs, engineering documents etc). Now with CARA you can manage the entire process within the same repository as your content.

The following is a list of features offered through CARA for Change Control:

- Create Change Request forms using the CARA Forms builder – including fields that appear based on conditions of other fields or become mandatory based on conditions.
- Use drag and drop to associate (relate) documents that are part of a Change Request together
- View the complex set of relationships between documents using the CARA Relations Manager
- Full workflow integration – build complex processes, and allow users to start, take part in, and report on these in CARA
- Provides multiple views of documents: Repository, Structure (Foliko) and My-Desk including Tasks and Favorites and the unique Dimensions (see side panel).
- Displays supporting information in Widgets Pane: Locations, Related Documents, Renditions, Tasks and Versions or any other widgets you build to include *RESTful web services*.
- Summary and reporting views of workflows, status, searches across multiple documents, with Export to Excel feature and graphic / chart display on the Dashboards
- Watermarking, eSignature and controlled printing of Change Request packages, including associated forms.
- Fully multi-lingual including many European languages as well as Japanese, Chinese and Arabic.
- Behind the scenes – full configurability through the Generis DocConfigurator product to allow companies to build their own applications, using 30+ areas of configurability: properties screens, automatic folders, languages, data dictionaries, dynamic no-maintenance security, audit and eSignature, Trash Can, search...
- All user choices saved as personal preferences and displayed on any PC or mobile device.

REPORTER

The CARA³ Reporter is the next generation of search and reporting. The search itself consists of a user search definition, but based on type OR classification, and including the standard operators and attribute / full text searching. The differences become apparent when you launch the search – it is **fully asynchronous** allowing you to continue working on other things while the search runs. Administrators can run DQL searches.

DASHBOARD

The Dashboard is a dynamic place to assemble query results. Add any query to the dashboard, and results can be shown as tables, charts or graphs, exported to Excel or embedded as widgets in the main view.

USER PREFERENCES

All settings that users choose (column displays and widths, dimensions tree-view, filters, cabinet restrictions and so on) are saved so that the user can login from another machine and will have the same preference choices applied.

CONFIGURABILITY

The Generis DocConfigurator product is fully leveraged behind the scenes to ensure that the cara3 interface is as configurable as possible. The configurations are not restricted to object type, as is the case on many configuration products, but based either on categories (any query set) or Aspects (where supported by the repository in question). There are over 30 areas of functionality that can be configured –refer to our information on DocConfigurator for details.

Contact us

Please contact us to arrange a demo or request additional information. We also provide free, fully functional evaluation downloads so that you can work with our products and ensure they meet your requirements.
