

# BatchPorter

## Configurable Batch Import / Export for Documentum

### HIGHLIGHTS

#### Batch Export

- Export documents, folder structures and virtual documents
- Define which versions and renditions to export
- Select standard or custom properties to export – Excel sheet will be built including data validation and picklists from dictionaries

#### Batch Import

- Import folder structures and files with metadata from Excel
- Build Virtual Documents
- Extract Microsoft properties automatically into the Excel
- Run import in “validation” mode to test

#### Background Transfer Agent

- Run the import without requiring DFC locally, via FTP
- Pause and resume import jobs
- Run in the background (system tray)

BatchPorter is a configurable utility for batch importing and batch exporting of documents to and from Documentum docbases.

Coupled with the Background Transfer Agent (BTA) uploads can be done asynchronously via FTP including pause and resume.
