

Check, fix and optimize

PDF files for submission readiness

Check PDF for a range of issues

Misalignments and misplaced watermarks
Bookmark and hyperlink issues
Pagination faults
New Regulatory Authority Accessibility requirements
Security settings, legibility, colours and more

Fix the PDF

PDFReady will fix many of these issues automatically, removing most manual work; any issues that may need a user decision are reported neatly and intuitively for immediate action
The PDF is returned either as a new rendition or replacing the original PDF rendition/content

Integrated with CARA and other DMS systems

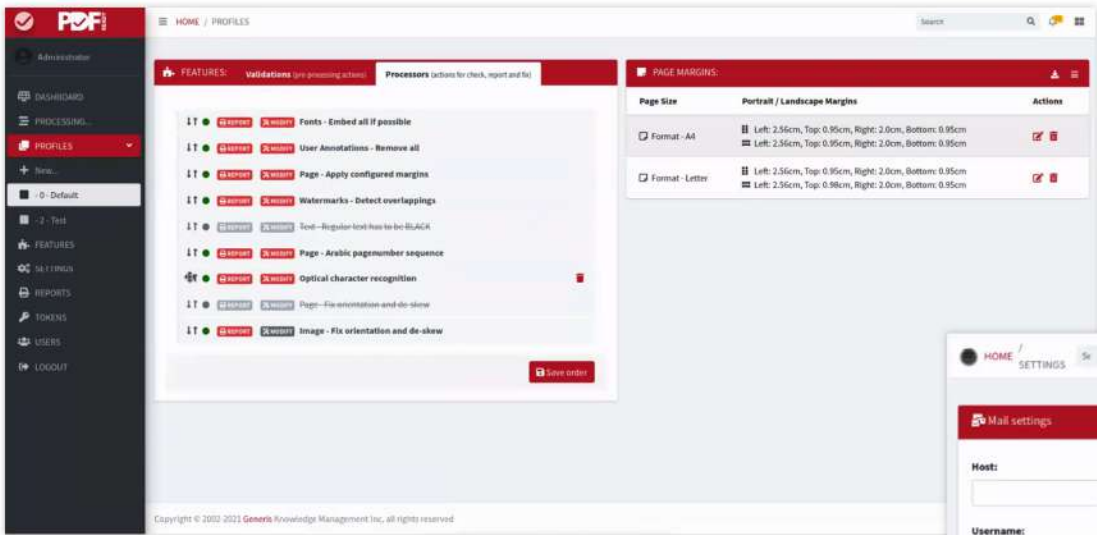

PDFReady is fully and seamlessly integrated into CARA for one-click functionality. It can be directly integrated with any Documentum-based product, including D2, FirstDoc or Webtop, or integrated via REST with any non-Documentum system

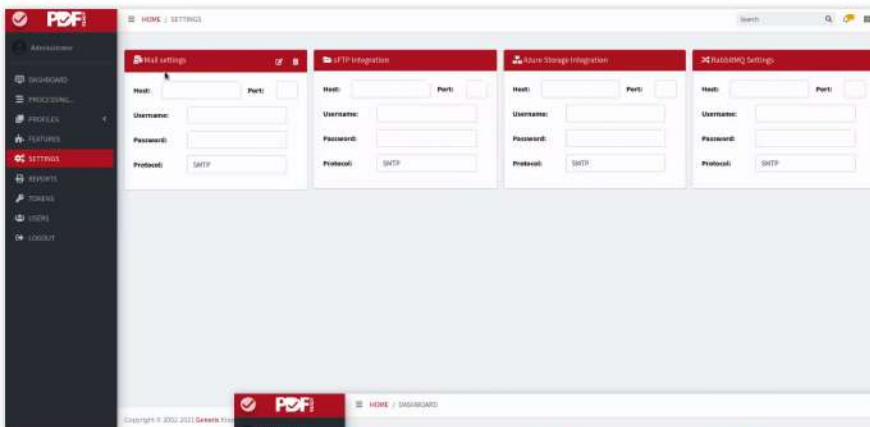

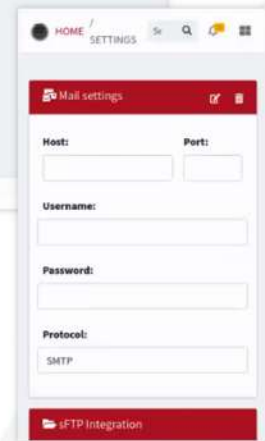

Cloud or On Premise

The PDFReady tool is available for installation on premise or via REST API from our GxP cloud service, offered as multi-tenant or VIP single tenant based on your requirements

Make your documents submission ready

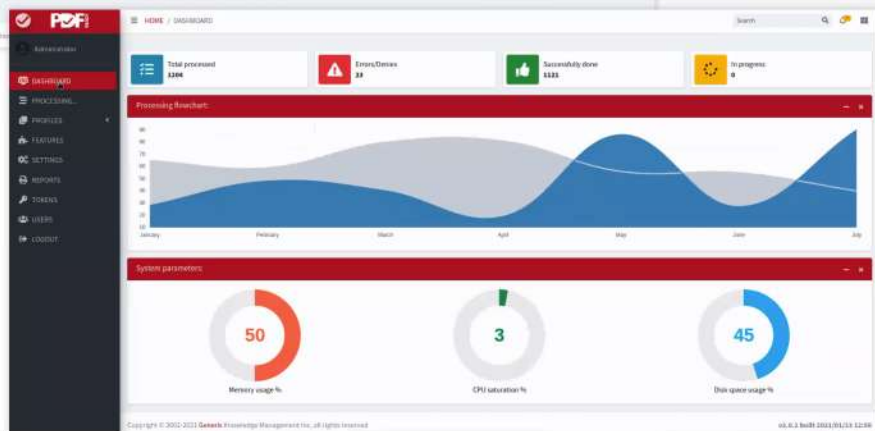

Mobile device compatible

Connect to different systems: CARA, Sharepoint and others...

Dashboards and easy reporting

The **problem** that needs to be solved

PDF documents are simple in format but complex in execution. Regulatory authorities require standards including embedded fonts, fast web view, and other features; meanwhile, other quality standards require that bookmarks function, headers, footers and margins remain in their place, pagination makes sense, and a document prints legibly. These details can very easily get marred or broken over the course of a document's life, and repairing them for submissions has traditionally been a manual and time-intensive process.

Source document

- PDF rendition of a document in non-PDF original format
- PDF original format document (imported and/or scanned)

PDFReady

- Document submitted to tool via API based on a rule e.g. Approved status
- Run the checks
- Create a report for the document
- Correct the issues which can be corrected and create output PDF

PDFReady

- Document returned to the DMS via API
- Associated as an additional rendition for publishing OR replaces original rendition or PDF content based on configuration

Tool checks performed

- Misalignments
- JavaScripts
- Markings/ headers/ footers
- Native and custom PDF properties
- Annotations
- Misplaced watermarks
- Bookmark and hyperlink issues
- Pagination faults
- Page format
- Upgrade PDF version to specified version(s)
- PDF Accessibility for new Health Authority requirements
- Security settings
- Legibility
- Initial View settings
- Fast Web View settings
- Colour formatting
- OCR as a user option
- Margins fix (content shrink into)
- Signatures detect & report
- Redaction / fixing wrong redactions
...and more!
